Kickoff

Peter Ganong and Maggie Shi

October 30, 2024

MUD Final project

- ▶ Timeline
    - ▶ Idea/plan/partners – now

    - ▶ Work one week in Nov before Thanksgiving

    - ▶ Mon-Tue-Wed before Thanksgiving

    - ▶ you might have time after break depending on your slot (slots allocated randomly, will post schedule after the quiz due Friday closes).

- ▶ Where to find datasets
    - ▶ Choose one connected to your policy interests.

    - ▶ It will be better for your job applications / portfolio if you choose the dataset, not me.

    - ▶ Public datasets are everywhere: Google cloud, Kaggle, city's open data portals, replication files for academic papers

PS3 debrief

▶ Overall students did very well, not a lot of systematic or correlated errors.

▶ Some students wrote answers and did not present any git output, we marked them down since we could not verify their answers

PS4 small changes I

We updated the problem set in the student repo.

▶ In "Calculate zip code's distance to the nearest hospital", we simplified 2. You no longer have to create a function to see if the polygons intersect.

▶ In "Calculate zip code's distance to the nearest hospital", we eliminated 4a. You no longer have to time the join of the subset first.

PS4 small changes II

▶ Mitch noted that there was a discrepancy in the template (which had subquestions) and the problem set (which in the student repo did not). Thank you!
  ▶ The problem set has been updated

▶ The template was missing some of the header material
  ▶ This issue is fixed (but not need)

  ▶ Going forward, we will put header material in exactly one place, which will be the template
